Claim Rejections - 35 USC § 112

Claims 3, 4, and 22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3, line 1, recites "first heating means, which lacks antecedent basis. It should evidently specify "range-top" heating means.

Claim 22 recites "the first chamber is a warming drawer," which is inconsistent with claim 21 from which it depends. The second chamber is the warming drawer.

Claim Rejections - 35 USC § 103

Claims 1, 2, 5-7, 16, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat. Appln 2005/0173401 (US'401) in view of British Pat. 2,252,647 (GB'647).

US'401 discloses, at Figs. 1-4 and paragraphs. [0017] and [0021], a plurality of range top heating elements 402-408, a first range chamber heating means with bake and broil elements 410, 412, and a second range chamber comprising a warming drawer. US'401 does not explicitly disclose a central microprocessor for controlling all heating functions. However, referring to Fig. 1, page 3, lines 2-23, and page 5, lines 21-26, especially, GB'647 discloses a central microprocessor 19 for controlling all heating functions in a range oven. It would have been obvious to adapt the CPU of GB'647 to the range of US'401 since GB'647 teaches such to improve power usage efficiency.

Claims 3, 4, 8-15, and 18-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'401 in view of GB'647, as applied to claims 1, 2, 5-7, 16, and 17 above, and further in view of US Pat. 6198080 (US'080).

The claims differ from US'401 in view of GB'647 only in calling for a range top warming element, a bridge burner, and a glass capacitive touch pad operator interface. Referring to Figs. 1-3, col. 2, lines 3-14, and col. 3, lines 4-9, US'080 discloses a range top warming element 26, a bridge burner, and a glass capacitive touch pad operator interface. It would have been obvious to adapt the warming, bridge, and touch pad control means of US'080 to the range of US'401 in view of GB'647, to enhance cooking versatility and convenience of operator control and cleaning.

Applicant is strongly urged to review the prior art cited but not applied when replying to this Office action.
